

Team Developer 4.2

Team Object Manager Enhancements

- You can now add a file of the same name to more than one folder in a project.
- Your changes to a project's log properties are now retained.
- When checking in a file that has not been modified, the status message describing this condition now shows all text, not just the first 255 characters.
- In the Diff tool window the "thumb" on the horizontal scroll bar now performs scrolling.
- In several dialogs and menu items, keyboard accelerators have been added, corrected, or reorganized.
- Many other minor defects in Team Object Manager were corrected.

Miscellaneous Enhancements

- Performance when accessing Oracle 9i via OLEDB has been improved.
- COM servers created in Team Developer 4.2 can be silently registered and unregistered using the following syntax:
MyCOMServer.exe /RegServer /Silent
MyCOMServer.exe /UnregServer /Silent

Note: Normally no dialog will appear, but if there is an error during the process, an error dialog will appear.

- A new class definition, HTTPRequest, is added to the existing XML-related classes in library file xmllib.apl
This new class enables you to send and receive text strings, or XML documents, using the HTTP protocol.
Exchanging XML documents via HTTP is one of the principal ways businesses use SOAP, Simple Object Access Protocol, so this class will be very useful for many customers.
This version ships with sample applications that illustrate how the HTTPRequest class is used. They are not part of the regular Team Developer Samples Installer task, but can be individually uncompressed from file HttpRequest_Samples.zip.

Note: Note that your internet connection may not currently support web services, so if you wish to develop SOAP or other web service clients, you may need to configure your connection or proxy server to allow this.
