

# Team Developer 5.1 SP2 Release Notes.

## External DLL's with HSTRING's and UDV's.

A new section of documentation was added to the "Developing with SQLWindows" document that talks about this topic. See [External DLL's with HSTRING's and UDV's](#)

## Sybase UNITEXT data type.

The sybase data type UNITEXT is not supported in this release of Team Developer.

## ODBC longbuffer setting:

Make sure that the size of the ODBC longbuffer setting in the sql.ini file is less than or equal to the largest allowable size of the TEXT or image data type of the respective database. For sqlserver this is 2GB's for TEXT/IMAGE data type. If this value is greater than this allowable size the database will run into the following error:

"Error 20029: "[Microsoft][SQL Native Client] String data, length mismatch"
