

New Features in Team Developer Version 5.1 SP3 HotFix 3

Performance enhancement for applications that are intensive with respect to creating and destroying windows.

Code was added to check if a window has destroyed itself during creation as the create window process is finishing. If this condition arises we move destruction of this window from the end of the message queue to the front of the message queue and return a NULL handle.

This behaviour can be over-ridden thereby reverting back to the same behaviour prior to TD 5.1 SP3 HF3 by adding a new DWORD value called **DeferWindowSelfDestruct** with a non zero value to the registry key:

HKEY_CURRENT_USER\Software\Gupta\SQLWindows 5.1\Settings
